I view architecture as a collaborative process between the architect and owner that extends to include the contractor. My approach is to design a wide variety of schemes based on meetings with the owner which we review and refine into a finished design.

Details for custom cabinetry, trim, and end detailing can be designed as needed. I provide enough drawings to enable the client to understand fully the design concept. The quality of a design is enhanced by seeing collaboration as a process that can enrich the final design and the client's experience with the project.

1. An architect is specially trained to provide a quality design customized to the client's needs.

2. In the long run the design is more cost effective. The process of creating drawings can point out key questions that need to be resolved prior to construction, saving both time and money.

- An architect can suggest materials and technology.

- An architect can find contractors and review bids with owners.

- An architect can supervise construction and clarify the contractor's questions.

3. A better design means more enjoyment of the new or renovated space.

Graduated from Brown University in 1982 with a Bachelor of Science degree in civil-structural engineering.

Received a Master of Architecture degree from the University of Pennsylvania in 1985.

Started a sole-proprietorship in 1989 with a focus in residential work - remodeling and new construction.

Fully licensed and insured

Full Architectural Services Include:

- programming-
  deciding what to build

- schematic design-
  rough, preliminary sketches

- design development

- construction drawings &
  specifications

- assistance with reviewing
 bids and hiring a contractor

- construction administration

Limited Services can also
be provided.

Additional services include
space efficiency consulting
to maximize use of existing
space.
